Microcontroller LAB Mid-term Report

Title:

Student Details:

Name	Registration No	Batch No	Signature

Date of Submission:

1. Problem statement for mini project:

   "Design system level solutions or processes for engineering problems that meet the specified needs with appropriate consideration for public health and safety, and cultural, societal, and environmental considerations with an understanding of the limitations."
2. Introduction
3. Articulate problem statements and identify objectives
4. Identify engineering systems, variables, and parameters to solve the problems
5. Identify existing processes/ solution methods for solving the problem
6. Build models/ prototypes to develop a design solution
    a. Working Principle (Explain using block-diagram representation)
    b. Circuit Diagram with explanation
    c. Programming – Algorithm/flowchart
